

Android Mobile Learn

Blackboard

ANDROID

This document will serve as a guide to successfully use the Android Blackboard Mobile Learn app to navigate and participate in your Strayer course.

Let's first begin with some system requirements and considerations.

- To get the full mobile experience you must have android 2.3 or newer (Older versions will not have the blackboard learn App available for download)
- If you are using an older version than the most current Blackboard Mobile Learn App, please go to the Google Play store and update to the newest version
- If you are using an older than current version of the Blackboard Learn App, content in your course may not be fully accessible or function correctly.
- Additional Support for installation and setup can be found at:

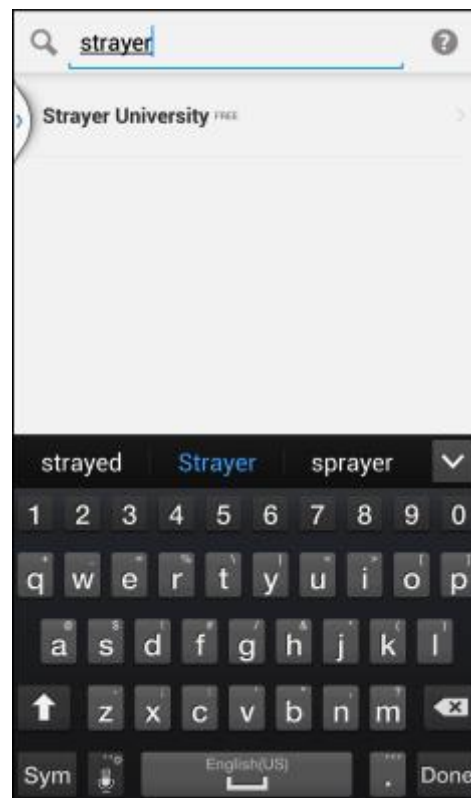

<https://www.blackboard.com/Platforms/Mobile/Support/Support-for-Blackboard-Mobile.aspx> or by calling the Strayer Helpdesk: 1-877-642-2999

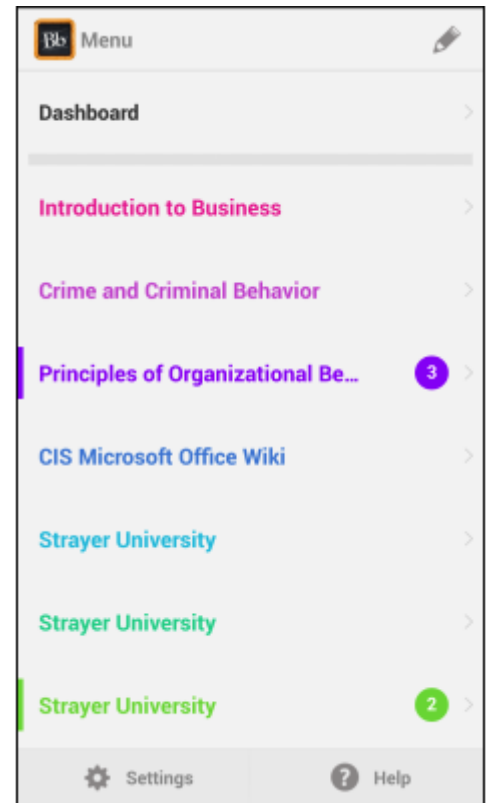

Now that you have the most current app, you can access your courses by opening the Blackboard Mobile Learn app and searching for “Strayer University”

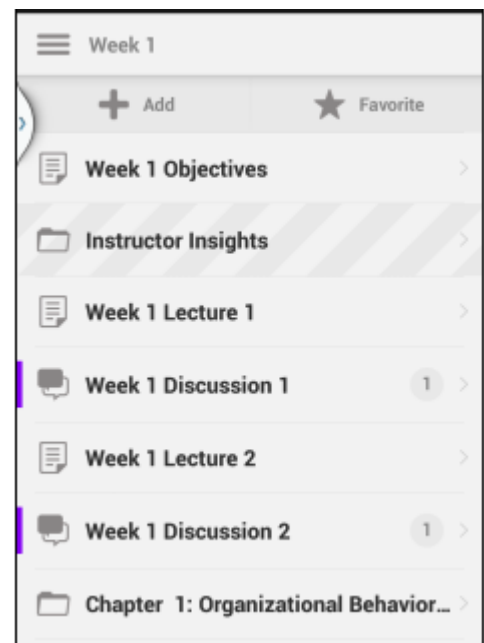

Once you click on “Strayer University”, you can login using your iCampus login credentials. *If you end up on the blue iCampus login screen, click back on your Android device and re-enter your credentials on this screen:

A screenshot of the Strayer University login screen within the Blackboard Mobile Learn app. The screen displays the Blackboard logo and the text "Learn" at the top. Below this is the Strayer University logo, which includes the year "1892" and the text "STRAYER UNIVERSITY". The login form consists of two input fields: "Username:" with the text "su20000000" entered, and "Password:" with a masked password "*****". A "Login" button is located at the bottom of the form.

You will find your courses listed out. You can change the color, name and order of the courses by clicking the pencil (edit) icon.

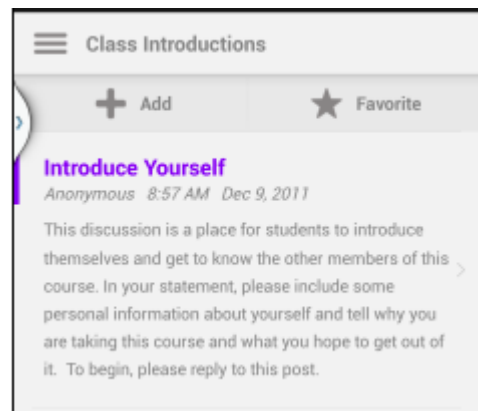

When you click into your course, the layout will mirror the layout seen in the full blackboard learning environment.

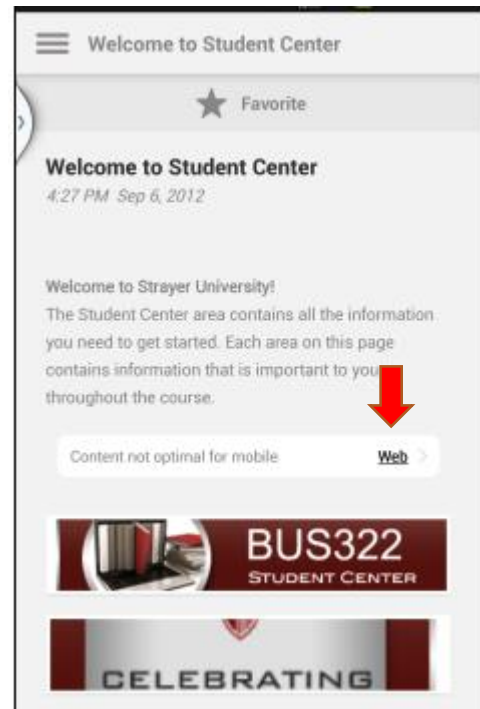

There may be elements of the course that are not fully optimized for the Blackboard Mobile Learn App. When you click an area that was not optimized for mobile learning, the Blackboard Webpage will open in a similar view as a full computer browser. *You can explore the page via your mobile device but you may not have full functionality as you would find using a desktop browser.

Items such as discussions, gradebook, and weekly objectives have been optimized for mobile access.

Some items that contain graphics, links or HTML styled coding may not show exactly the same as a desktop browser. The Student Center welcome message shows all the text but the graphics will render as separate attached items. You can quickly see how the page is formatted by clicking the “Web” link beside the “Content not optimal for mobile” message.

Most lectures will play on your mobile device as well. When you click the link to a lecture, you may find multiple links and icons. The lecture can be launched by clicking the first text link. “Week 1 Lecture 1” in this example. The other links and graphics provide a link to the graphic as how you would see it in a desktop browser.
